Data Storytelling

Food delivery platforms generate millions of data points — but raw data alone doesn't drive decisions. This project identifies where revenue is being lost and what drives customer behaviour.

No Customer Segmentation Insight

Budget, mid-tier, and premium users behave very differently. Without segmentation, every customer gets treated the same — wasting marketing budget.

Add-On Revenue Being Left Untapped

Only 23.62% of customers add extras to their order. The remaining 76% represent an untapped upselling opportunity worth ₹3.62M.

External Factors Not Being Used

Orders shift on festival days and in bad weather, yet these patterns were never factored into demand planning or promotions.

No Dashboard for Fast Decisions

Static spreadsheets can't slice by city, segment, or time. Managers needed live, filterable dashboards to act quickly on the data.

Project Workflow — End-to-End Analytics Pipeline

KPIs were designed to answer specific business questions — not just calculate numbers.

DATA CLEANING STEPS PERFORMED

- ✓ Checked for null values — confirmed 0 missing across all 40 columns
- ✓ Removed duplicate rows — verified all 1,00,000 records are unique
- ✓ Validated data types — corrected integer/float/string mismatches
- ✓ Renamed columns for clarity in Power Query
- ✓ Engineered new column: Loyalty_Bucket based on order frequency

KPIs were designed to answer specific business questions — not just calculate numbers.

₹46.49M

Total Revenue

How much did customers spend in total?

₹3.62M

Add-On Revenue

How much extra came from upselling?

23.62%

Add-On Conversion

What % of customers added extras?

3.98 ★

Avg Restaurant Rating

Are customers satisfied overall?

ALL 10 DAX MEASURES CREATED

01

Dataset Overview

0 null values · 40 features · 21 int · 7 float · 12 string — dataset ready for analysis

02

Order Value Distribution

Right-skewed distribution · 63% of orders fall between ₹200–₹600 · Mean ₹464.87

03

User Segment Analysis

Budget 43.8% · Mid-tier 41.0% · Premium 15.2% — each segment has distinct spending patterns

04

City & Cuisine Breakdown

Bengaluru leads at 21.7% · Top 3 cities = 60% of all orders · North Indian is most ordered

05

Add-On Behaviour

Only 23.62% of sessions include an add-on — a consistent gap across all cuisines (22–25% range)

06

Time & Weather Patterns

Peak hours: 12–13 & 19–21 · Sunny days see most orders (35K) · Stormy days lowest (5K)

07

Correlation Analysis

Base cart value ($r=0.947$) strongest predictor · Price tier ($r=0.506$) strongest independent driver

Understanding how different customer types behave is one of the most valuable outputs of this project.

Budget

Largest Segment

43.8%

of all users

Users **43,813**

Avg Order Value **₹~380**

Add-On Behaviour **Low**

Price-sensitive users. Rarely add extras. Respond well to discount offers.

Mid-Tier

Most Stable

41.0%

of all users

Users **40,971**

Avg Order Value **₹~465**

Add-On Behaviour **Medium**

Balanced spenders. Moderate add-on behaviour. Highest growth potential.

Premium

Highest Value

15.2%

of all users

Users **15,216**

Avg Order Value **₹~620**

Add-On Behaviour **High**

High spenders. Frequently add extras. Drive disproportionate revenue.

Interactive · Live slicers by City & Cuisine · All charts update in real time

6 KPI Cards

Total Revenue · Orders · Add-On Rate · Avg Order · Rating · Conversion

Interactive Slicers

Filter by Cuisine & City — all visuals respond instantly

Revenue by City

Bengaluru ₹10.2M leads · Top 3 cities = 60% of revenue

Meal Time Trends

Lunch 32K & Dinner 29K are the highest order windows

Add-On Analysis

North Indian tops add-on revenue at ₹0.69M

Interactive · Live slicers by City, Cuisine & User Segment · All charts respond in real time

3 Customer Segments

Budget 43.8% · Mid-Tier 41.0% · Premium 15.2% — each with distinct behaviour

Traffic vs Delivery

Jam traffic adds ~37 min · yet customers still order — strong demand signal

Weather Impact

Sunny days drive ₹16.4M revenue · Stormy conditions see sharpest drop

Revenue by Price Tier

Tier 2 restaurants lead at ₹21.6M despite similar order count as Tier 1

Festival & Offer Orders

7,890 festival day orders · 30K offer-linked orders tracked in dataset

Sales Performance — Revenue, Cities & Add-Ons

ORDERS BY CITY

📍 Top 3 cities account for 60% of all orders

REVENUE BREAKDOWN

₹46.49M

Across 1,00,000 orders

Total Revenue

₹3.62M

7.8% of total revenue

Add-On Revenue

₹33M

vs ₹13M on weekends — habitual demand

Weekday Revenue

+₹13.91

Average spend boost when offer applied

Offer Uplift

Key Insights & Data-Driven Recommendations

FINDING

76.4% of customers checkout without any add-on

→ Targeted pop-ups at checkout could significantly increase add-on conversion rate

FINDING

Offers boost add-on rate from 21% → 29% (+8 pts)

→ Offer-based nudges are measurably effective — especially for budget segment

FINDING

Bengaluru, Mumbai, Hyderabad = 60% of all orders

→ Focus city-specific campaigns on these 3 markets for maximum ROI

FINDING

Weekdays generate ₹33M vs Weekends ₹13M

→ Demand is habitual, not occasion-driven — target weekday lunch/dinner windows

FINDING

Peak hours: 12–13 (lunch) & 20–21 (dinner)

→ Show add-on recommendations before these peak windows open

FINDING

86.3% are first-time visitors to a restaurant

→ Platform loyalty is strong, restaurant loyalty is low — upsell platform-wide
